USER INTERFACE DESIGN

COMPARISION OF TWO UI DESIGN BETWEEN TWO FIGMA CREATION

BAD WEBSITE

GOOD WEBSITE

BAD WEBSITE:

1. Design Style

The design uses excessively bright and clashing colors that overwhelm the user. Multiple fonts, text sizes, and decorative effects are applied without consistency, creating visual chaos. There is no clear visual hierarchy, as all elements compete for attention at the same time. The heavy use of borders, shadows, and animated-looking elements makes the interface difficult to read and visually exhausting.

2. Purpose

The purpose of the design is unclear. The page attempts to present an announcement, collect user information through a sign-up form, promote a newsletter, and display a prize notification simultaneously. These conflicting goals confuse users and make it difficult to understand what action is most important. Aggressive language such as “REQUIRED!!!” and exaggerated rewards reduce trust and make the page feel misleading or spam-like.

3. Navigation

Navigation is poorly structured and confusing. There are multiple calls to action placed in different areas of the screen without a clear flow. The sidebar distracts from the main content instead of supporting it. Pop-up elements block important information and interrupt the user experience. Users are not guided step-by-step, which leads to frustration and abandonment.

4. Content

The content lacks clarity and professionalism. Placeholder text such as Lorem Ipsum is used instead of meaningful information. Excessive capitalization and punctuation make the text hard to read and appear untrustworthy. The messaging is vague and does not explain the value or purpose of the actions requested from the user.

Conclusion

This design fails because it prioritizes attention-grabbing visuals over usability and clarity. Instead of guiding users calmly and effectively, it overwhelms them with visual noise, unclear messaging, and poor navigation. Good design should focus on simplicity, clarity, trust, and a clear user goal.

GOOD WEBSITE:

1. Design Style

The design uses a clean and minimal visual style with a consistent colour palette. Soft colours and gradients create a calm and modern appearance without overwhelming the user. Typography is consistent, with clear font sizes that establish a strong visual hierarchy. Proper spacing and alignment improve readability and give the interface a polished and professional look.

2. Purpose

The purpose of the design is clear and focused. The website aims to promote a UI design product and encourage users to get started. The main message is immediately visible and easy to understand. Supporting information explains the benefits clearly, helping users understand the value of the product without confusion.

3. Navigation

Navigation is simple and well-organized. The menu is placed at the top and includes clearly labeled sections such as Features, Testimonials, Pricing, and About. Call-to-action buttons like “Get Started” are prominent and easy to find. The layout guides users naturally through the page without interruptions or distractions.

4. Content

The content is clear, concise, and professional. Text is easy to read and focuses on explaining benefits rather than overwhelming users with information. There is no unnecessary content or placeholder text. Icons and visuals support the content and improve understanding without distracting from the main message.

Conclusion

This design succeeds because it prioritizes clarity, usability, and user experience. It guides users calmly with a clear purpose, structured navigation, and meaningful content. By focusing on simplicity, consistency, and trust, the design effectively demonstrates strong UI and UX principles.
