ROLLNO:240701133

FRAME:1

INSTRUCTION PAGE:

Chunking Analysis of the Instruction Page Chunking is a cognitive strategy that breaks down information into smaller, manageable units, making it easier to process and retain. The Memory Recall Task instruction page effectively utilizes chunking in the

following ways:

1. Clear & Sequential Numbering:

Instructions are broken into 6 numbered steps.

Each step explains one action (observe, memorize, recall, etc.).

Logical Grouping of Information

- o Steps grouped into phases: Observation (Steps 1–2)
- o Memorization (Step 3) o Recall (Steps 4–5)
- o Performance (Step 6).

2. Visual Hierarchy & Design Elements

- o Large bold title: MEMORY RECALL TASK.
- o Bullets + spacing reduce clutter. o Highlighted START button attention
- o Bee mascot adds playful engagement.

3. Time Constraint Reinforcement

- o Step 5 explicitly says: “You will have 5 seconds to view the items.”
- o Sets clear expectation before task begins.

4. Simplicity & Clarity

- # MEMORY RECALL TASK

INSTRUCTION

 - 1.You will be shown several groups of icons or text.
 - 2.Carefully observe each group during the viewing time.
 - 3.Try to memorize as many items as possible.
 - 4.After viewing, recall the items you remember.
 - 5.You will have 5 seconds to view the items, then recall them on the next screen.
 - 6.Accuracy in recall is more important than speed.

START

CHUNKING PHASE:

1. Purpose of the Screen

- ## 2. Countdown Timer

- **Location:** Top-left corner of the screen

- **Style:** Red circle with bold white text (e.g., “00:05”)
- **Function:**
 - Shows how much time is left to view the icons
 - **Creates** urgency and keeps users focused
 - Automatically transitions to the next phase when time ends

3. **Progress Bar:**

- **Location:** Just below the screen title
- **Style:** Horizontal bar with red fill that decreases over time
- **Function:**
 - Visually reinforces time pressure
 - Helps users pace their observation
 - Complements the countdown timer

4. **Grid of Icons:**

Layout: Typically 5x4 or 3x3 grid

Content:

Icons include characters, emojis, objects (e.g., pig, burger, police car, bee)

Designed to be visually distinct but thematically groupable

Chunking Strategies Encouraged:

Group by category (e.g., animals, food, vehicles)

Group by color or background

Spot repeated icons (e.g., multiple bees or burgers)

FRAME:3

RECALL TASK:

ANALYSIS OF THE MEMORY RECALL TASK – SELECTION PHASE

This screen represents the Selection Phase of a Memory Recall Task, where users recall and choose the items they remember from the previous Chunking Phase. Below is a breakdown of its components:

1. Purpose of the Screen

- This is the memory retrieval stage, where users select the items they remember seeing in the previous phase.
- The goal is to test the effectiveness of chunking and short-term memory retention.

2. Key Elements and UI Components

- "MEMORY RECALL TASK" (Bold Header) – Reinforces the purpose of the task.
- "SELECT THE ITEMS YOU REMEMBER:" – Clear instruction guiding the user to choose remembered items.

3. Radio Buttons

- Location: Below each icon.
- Function:

- Allows users to select remembered items.
- Simple, user-friendly interaction.

4. Submit Button

- Location: Bottom center of the screen.
- Function:
 - o Confirms user's selections.
 - o Moves the task forward to the result page.

5. Lock Option (Extra Point)

- Location: Next to certain icons or as an additional button.
- Function:
 - Lets users “lock in” a choice before
 - Prevents accidental changes once locked.
 - Adds a sense of commitment to the recall decision.

FRAME 4:

RESULT PAGE:

Analysis of the Memory Recall Task - Score & Feedback Screen This screen represents the Score & Feedback Phase of the Memory Recall Task, where users receive their performance evaluation based on the selections made in the previous Recall Phase.

1. Purpose of the Screen

- Provides feedback on recall accuracy by showing the number of correct answers.
- Allows users to decide their next action (continue, restart, or exit).

2. Key Elements & UI Components ? ? Title & Score Display

- "MEMORY RECALL TASK" – Reinforces the game's title.
- "YOUR RECALL SCORE!" – Indicates that the user's performance is being displayed.
- A wooden scoreboard with the user's score (4/5) in bold, showing correct answers out of total attempts. ? ? Action Buttons (Right Side)
 1. "CONTINUE" – Proceeds to the next level or stage.
 2. "RESTART" – Allows the user to retake the memory recall test.
 3. "EXIT" – Ends the task and exits the game

4. Cognitive & UX Benefits

- Instant feedback helps users track their memory performance.
- Multiple options (Continue, Restart, Exit) give users control over their learning experience.
- Visual & gamified elements make the task engaging and less stressful.
- Instant feedback helps users track their memory performance.
- Multiple options (Continue, Restart, Exit) give users control over their learning experience.
- Visual & gamified elements make the task engaging and less stressful.
