

EXPIREMENT-7

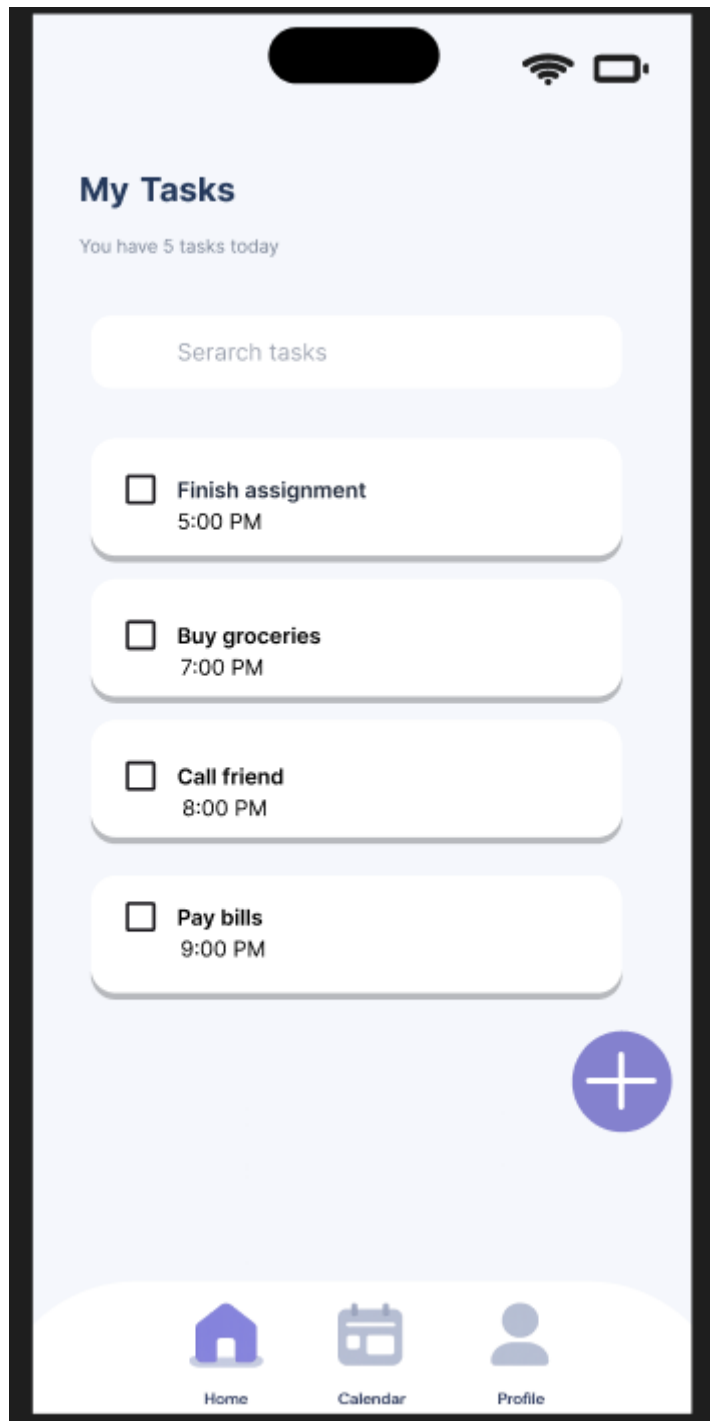

NAME: MS.ELAMVAZHUTHI

ROLL NO: 240701133

Objective:

To design a mobile app interface using different colors, text styles, and visual elements, collect user feedback through a Google Form, and improve the design based on the responses.

OLD DESIGN

The first version of the To-Do app was created in Figma with the aim of making a simple task management screen. The layout included a title, subtitle, search bar, four task cards, a floating add button, and a bottom navigation bar.

The old design used:

- Light gray background
- Dark blue title

- White task cards
- Purple add button
- Small text for subtitle and task details

Elements in the old design:

1. Title:

- “My Tasks”
- Placed at the top left
- Small size and dark blue color

2. Subtitle:

- “You have 5 tasks today”
- Very small and light in color
- Difficult to read

3. Search Bar:

- Small width and height
- Plain white rectangle
- Less attractive

4. Task Cards:

- Four cards showing different tasks
- Cards had small shadows
- Text inside the cards was small

5. Add Button:

- Purple “+” button at the bottom right
- Small in size and not very noticeable

6. Navigation Bar:

- Included Home, Calendar, and Profile

- Labels below icons were too small

Feedback Received from Google Form:

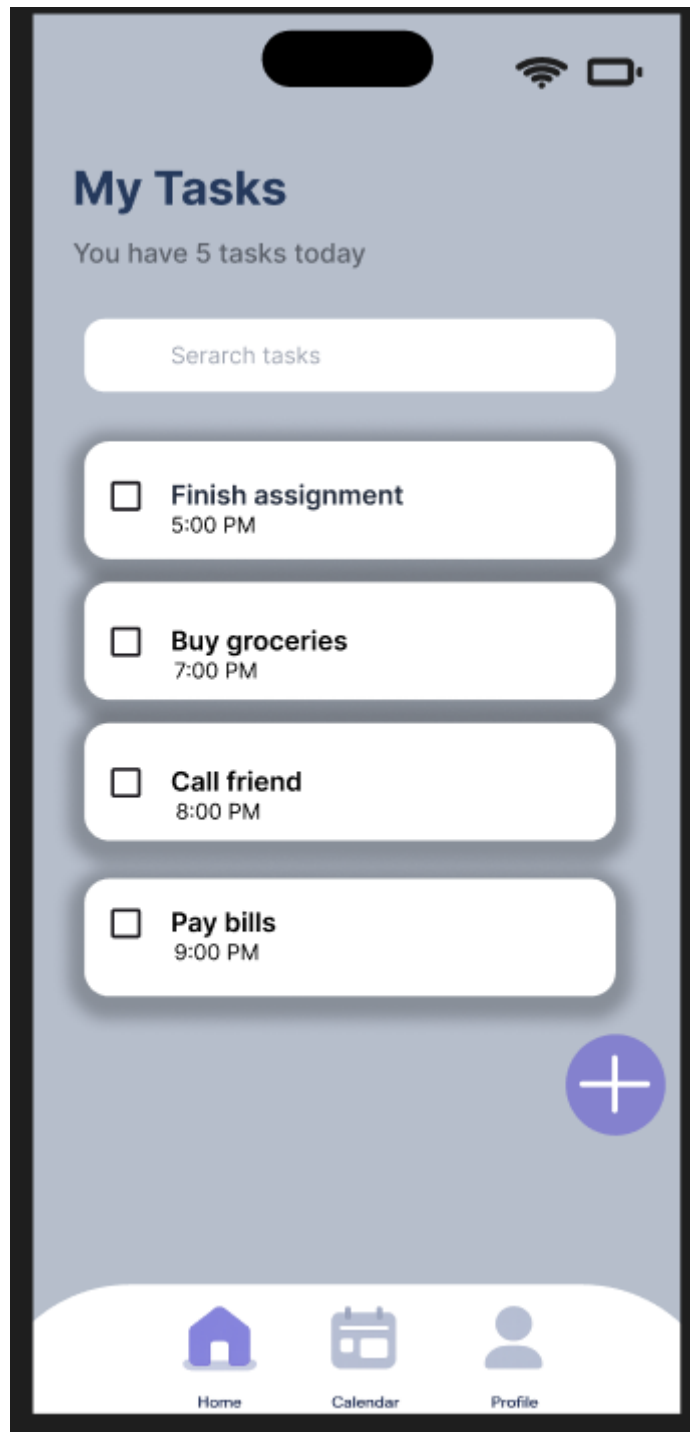

After sharing the design with users through Google Form, the following feedback was received:

- Many users said the text size was too small
- Several users said the task cards were not clearly visible
- Some users felt the search bar looked plain
- Users suggested adding more spacing between the cards
- Many users wanted the add button to be larger
- Users preferred a cleaner and more modern appearance

Problems in the Old Design:

- Text readability was poor
- Layout looked crowded
- Task cards blended with the background
- Search bar did not stand out
- Button and navigation labels were too small

NEW DESIGN

Based on the feedback collected from users, the To-Do app design was improved to make it easier to use and more visually attractive.

The following changes were made:

1. Title and Subtitle:
 - The title size was increased
 - Subtitle text was made larger and darker

- Improved readability

2. Search Bar:

- Width and height were increased
- More rounded corners were added
- Search text became clearer

3. Task Cards:

- Added stronger shadow effect
- Increased spacing between each card
- Increased text size inside cards
- Cards became more visible and easier to read

4. Add Button:

- Increased the size of the button
- Used a brighter purple color
- Button became easier to identify

5. Navigation Bar:

- Increased icon and label size
- Improved spacing between navigation items

Advantages of the New Design:

- Better text visibility
- Cleaner and more organized layout
- Improved appearance of task cards
- Better user experience
- More modern design
- Easier to understand and use

User Response to the New Design:

After showing the improved design to users:

- Most users said the new version was easier to read
- Users liked the bigger task cards
- The larger add button was more noticeable
- The improved spacing made the screen look cleaner
- Most users preferred the new version over the old version

Comparison Between Old and New Design

Feature	Old Design	New Design
Title Size	Small	Large
Subtitle	Very light and small	Darker and larger
Search Bar	Plain and small	Larger with rounded corners
Task Cards	Small shadow and crowded	Strong shadow and more spacing
Task Text	Difficult to read	Clear and readable
Add Button	Small	Larger and brighter
Navigation Labels	Small	Bigger and clearer
Overall Appearance	Basic and crowded	Clean and modern

Conclusion

This experiment proved that collecting user feedback is important in UI design. The Google Form helped identify the problems in the old design. After making the suggested changes, the new design became more attractive, easier to use, and more user-friendly. Therefore, the improved version was selected as the final design.
