AIM

To design input forms that validate data such as username and password, and display error messages using HTML, CSS, and JavaScript with Validator.js.

Step 1: Setting Up the HTML Form

Create an HTML form with input fields for username and password.

```
<!DOCTYPE html>
<html>
<head>
  <title>Login Form</title>
</head>
<body>
  <form id="myForm">
    <label>Username:</label>
    <input type="text" id="username"><br><br>

    <label>Password:</label>
    <input type="password" id="password"><br><br>

    <button type="submit">Login</button>
  </form>
</body>
</html>
```

Explanation: This HTML code creates a login form with username and password fields and a login button.

Step 2: Styling the Form with CSS

```
body {
  font-family: Arial;
  background: linear-gradient(to right, #4facfe, #00f2fe);
}
```

```

}

form {
  background: white;
  padding: 20px;
  width: 300px;
  margin: auto;
  border-radius: 10px;
}

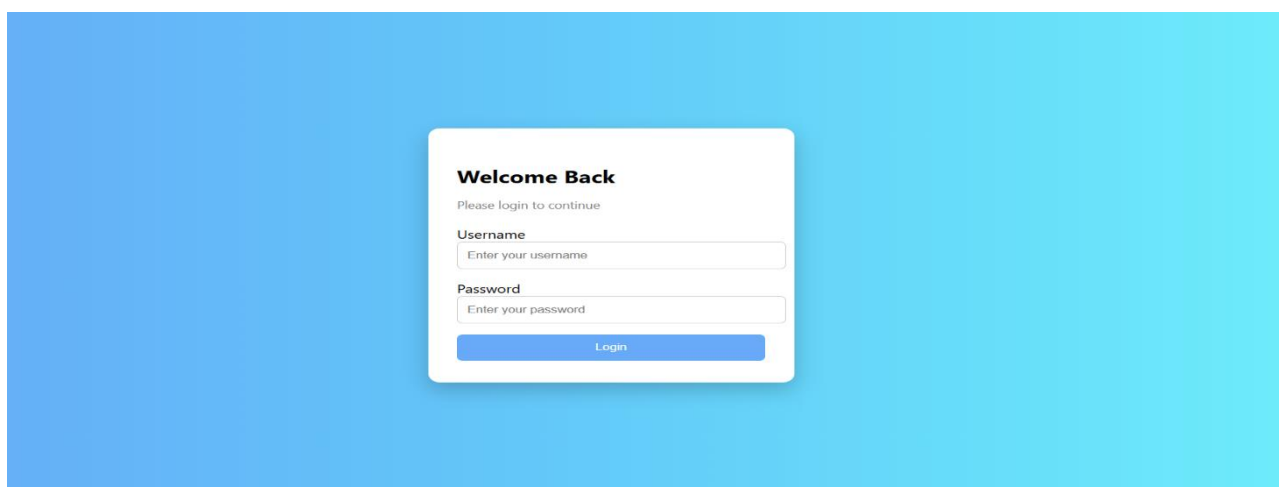

input {
  width: 100%;
  padding: 8px;
  margin: 5px 0;
}

button {
  width: 100%;
  padding: 10px;
  background: blue;
  color: white;
  border: none;
}

```

Explanation: This CSS improves the layout with centered form, background gradient, and styled inputs.

Output Screen:

Step 3: Adding JavaScript for Validation

```
<script
src="https://cdnjs.cloudflare.com/ajax/libs/validator/13.7.0/validator.min.js"></script>
<script>
document.getElementById("myForm").addEventListener("submit", function(e) {
    e.preventDefault();

    let username = document.getElementById("username").value;
    let password = document.getElementById("password").value;

    if (validator.isEmpty(username)) {
        alert("Username cannot be empty!");
        return;
    }

    if (!validator.isLength(password, { min: 6 })) {
        alert("Password must be at least 6 characters!");
        return;
    }

    alert("Login Successful!");
});
</script>
```

Explanation: This JavaScript checks that the username is not empty and the password has at least 6 characters. Error messages are shown if validation fails.
